Answer any ONE of the following assignments:

Assignment 1: AI-Generated Test Case Builder + Script Execution

Problem Statement

Use an AI tool to generate test cases from a given requirement, then automate at least 1 test case using Selenium, Playwright, or Cypress.

Requirements

- Choose any simple public website (example: https://www.saucedemo.com).
- Use AI to generate 5 test cases for login functionality.
- Automate at least 1 test case.
- Include reasoning in the README about how AI helped test design.

Tech Expectations

- Selenium / Playwright / Cypress.
- Basic page object or structured scripts.
- AI-assisted test design, not AI-generated code alone.

Deliverables

- GitHub repo.
- README with:
    - AI-generated test cases (copy/paste is fine).
    - Automated script.
    - Execution steps.

Evaluation Focus

- Practical testing mindset.
- Ability to use AI to improve test design.
- Script quality and clarity.

Assignment 2: AI-Assisted Bug Report Generator

Problem Statement

Identify usability issues on any public website, use AI to convert your notes into well-formatted bug reports, then automate a small test validating one of the issues.

Requirements

- Candidate explores the site and finds 2–3 issues.
- Write raw notes.
- Use AI to transform the notes into structured bug reports (title, steps, expected, actual).
- Automate a simple validation script related to one of the bugs.

Tech Expectations

- Selenium / Playwright / Cypress.
- Basic locator strategies.

Deliverables

- GitHub link.
- README containing:
    - Raw notes.
    - AI-generated bug reports.
    - Test script.
